

PFQT™

PEM® SIDE ACTUATED QUARTER-TURN LOCKABLE PLUNGER

Delivers reliable panel attachment
through an intuitive quarter-turn motion
with positive locking engagement.

PEM® SIDE ACTUATED PANEL FASTENER

Side lever actuation provides convenient connections when vertical space is limited

The PFQTL™ panel fastener addresses the limitations of traditional slide plungers by preventing accidental unlocking during vibration or mis-operation, providing superior reliability in demanding applications. The quarter-turn mechanism provides superior holding strength of the pin in the extended position compared to spring loaded designs while maintaining the convenience of tool-free operation, combining security with ease of use.

The positive engagement system of the PFQTL™ fastener gives operators confidence in secure attachment and reduces the risk of panel displacement during equipment operation – ensuring consistent performance throughout the service cycle.

- **Fool-Proof Design**
Integrated mechanism positively locks plunger pin in the engaged position, for reliable fastening
- **Quarter-Turn Operation**
Intuitive 90-degree rotation provides positive engagement with clear visual and tactile feedback
- **Enhanced Vibration Resistance**
Spring compliance and secure locking mechanism maintain connection integrity under dynamic conditions
- **Versatile Configuration Options**
Available in left and right-hand turn directions to accommodate diverse design requirements
- **Durable Construction**
Retainer and plunger are hardened carbon steel with protective zinc plating ensure long service life

Fastener drawings and models are available at www.pemnet.com.
Custom sizes are available on special order. [Contact us](#) for more information.

F	Retainer 2				■	■			

(1) HRB - Hardness Rockwell "B" Scale, HB - Hardness Brinell.

(2) Temperature Limit: 210° F (99° C). Additional cap colors available on special order.

(3) See PEM Technical Support section of our web site for related plating standards and specifications.

Installation

1. Prepare properly sized mounting hole in sheet. Do not perform any secondary operations such as deburring.
2. Place the assembly in the anvil and then place the sheet over the shank of the fastener.
3. With punch and anvil surfaces parallel, rotate the assembly to the desired orientation in the panel and then apply squeezing force to embed the fastener in the sheet.

Type	Punch Dimensions		Anvil Dimensions		HAEGER® Part Number	
	H1 ±.020" / ±0.5mm	K1 ±.020" / ±0.5mm	H2 ±.020" / ±0.5mm	K2 ±.020" / ±0.5mm	Anvil	Punch
PFQT	.394" / 10mm	.945" / 24mm	.197" / 5mm	.201" / 5.1mm	H-152-4.6	H-143-4.6

PFQT fasteners are supplied in the locked position.

Type	Diameter Code	Test Sheet Material	Installation		Retainer Pushout	
			lbs.	N	lbs.	N
PFQTL	4.6	Cold-rolled Steel	2000	8900	79	350

(1) Published installation forces are for general reference. Actual set-up and confirmation of complete installation should be made by observing proper seating of fastener as described in the installation steps. Other performance values reported are averages when all proper installation parameters and procedures are followed. Variations in mounting hole size, sheet material, and installation procedure may affect performance. Performance testing this product in your application is recommended. We will be happy to provide technical assistance and/or samples for this purpose.

All PEM® products meet our stringent quality standards. If you require additional industry or other specific [quality certifications](#), special procedures and/or part numbers are required. Please contact your local sales office or representative for further information.

Regulatory [compliance information](#) is available in Technical Support section of our website. Specifications subject to change without notice. See our website for the most current version of this bulletin.
